NAZAR X

Our next-generation NAZAR X centralised threat detection and incident response solution is here. It can be deployed across your cloud environments, on-premises infrastructure and cloud applications ensuring full coverage from attackers.

This SIEM (security and information management) technology ingests multiple feeds from systems and services across your organisation, including services deployed in the cloud, to allow correlation of diverse events and log entries, which you can view in your dashboard.

This enables us to build you a threat view from diverse data items which may seem unconnected but, when analysed by our specialists, point toward an attack or data breach which would go missed without NAZAR X analysis.

NAZAR X

How NAZAR X Works

NAZAR X controls the automated collection and management of logs and events from across the entire infrastructure and cloud environment. This gives a detailed view of activity from almost any system, including:

- Alerts for unexpected events, suspicious activity and intrusion attempts.
- Extended storage of usually transient log data.
- Security configuration assessment, vulnerability management and compliance checks of all your devices.
- Extended Detection and Response (XDR).
- Stolen Credential Monitoring.
- Online access to real-time information surrounding log data and events.

You can access this level of analysis at any time through your access to the NAZAR X dashboard.

NAZAR X SOC Service

The NAZAR X solution is complemented by a fully managed service which combines next generation technologies and 24/7 monitoring from our UK based SOC.

Our SOC monitors, detects and responds to alerts and advises you on any corrective actions. Alternatively, our SOC can manage the entire process end to end.

NAZAR X SOC Features Include:

- Explanation. Installation and initial tuning of SIEM solution.
- Ongoing tuning and updated rules on new vulnerabilities.
- Monitoring of your environment and cloud for vulnerabilities.
- 24/7 monitoring and response of your systems.
- Analysis of false positives.
- Identification of real threats.
- Response or eradication of real threats.
- Compliance assessments.

NAZAR X Plus & Complete

With NAZAR X, we make your service capabilities clear for you to maximise on business benefit and minimise on duplication.

With our Plus and Complete NAZAR X packages, you can benefit from an even more comprehensive cyber security solution including incident response, internal vulnerability management, configuration assessment, XDR and an annual health check

We can help you tick the boxes for your compliance, insurance and most importantly your financial and reputational protection.

Chat to us via enquires@communicate.technology to find out which solution may best suit your needs.
